

Drafting an emerging picture

Name: Mohammed Alharbi

Community & UN SDG(s): SDGs 4 & 10

Date: 14 October 2023

Instructions:

Using your researched information fill out the flowing comparing the current state of the art with what you think new (software) innovations could bring to the community

Covering the orientations	
Compare the left-hand column of the document "Technology configuration inventory" table with the right-hand column of the document "Community characteristics & orientation" table. What do you notice about the match (or mismatch) between your dominant community orientations and the current configuration of tools?	
How well does the technology inventory cover the orientations? What themes emerged from both the community orientations and the technology configuration from your colleagues' notes	The technology inventory effectively addresses event management needs for educational settings. Platforms like Time.ly and Planning Pod cater specifically to academic events, while Eventbrite offers broader versatility. Themes suggest a focus on event organization and attendee management, but there's potential for tools that promote deeper community interactions.
<input checked="" type="checkbox"/> Are you almost there? <input type="checkbox"/> Are there big gaps?	I believe Eventeer is on the right track, aligning well with the needs of the student community. However, while the platform effectively addresses event management, there might be potential gaps.
What is the range of skills? If their interests and/or skills are diverse, could it cause conflict or distraction?	Within Eventeer, skills range from event planning to technical expertise. While diverse skills can enhance creativity, they might also lead to conflicts if not managed well. Clear communication and defined roles are crucial to harnessing this diversity effectively.
Achieving integration	
Look at all the pieces of your configuration	
What level of integration and interoperability has been achieved?	For Eventeer, integration has been prioritized to ensure seamless user experience. The platform is designed to interoperate with popular event management tools.
Where are there big gaps	There might be a need for more personalized event recommendations based on student interests or academic focus.
Balancing the polarities (Current state)	
How is the configuration balanced with respect to each polarity?
